

Able Chooses EazyStock

Able chooses EazyStock for inventory control management

Below is a copy of an interview that took place between Michael Bleier and Daniel Martinsson, EazyStock Business Unit Manager at Synchron. The original article can be found here at EazyStock.com.

We were looking for a solution that would extend visibility across our network of warehouses and unify our ERP system instances. After an initial ROI analysis of our data it became clear we had a lot of excess inventory on hand costing the company money and hurting our profits. With EazyStock, we plan to reduce inventory on hand by upwards of 20% while continuing to maintain the highest order fill rates to **ensure customer satisfaction**. EazyStock is going to be a key component for us moving forward to ensure we optimize our inventory levels and keep them optimized.

Michael Bleier Owner & President

Being delivered as a cloud service implies that there is no up-front investment in IT infrastructure that traditional solutions require. Moreover, since we were able to test Able's data in our demo environment, Able was able to see in advance the projected ROI that EazyStock was positioned to offer before they ever committed to the product. Not many other system providers can offer their customers that level of insight into a technology purchase!
